

Decide9ja

The AI-Powered Political Intelligence Platform for Nigeria

The Problem

220 million Nigerians lack reliable access to political information.

- **Information Asymmetry:** Voters don't know their representatives, their voting records, or budget allocations to their communities
- **Fragmented Data:** Political information is scattered across INEC, BudgIT, news outlets, and government portals with no unified access
- **Misinformation Epidemic:** WhatsApp forwards and social media spread false political claims with no verification tools
- **Language Barriers:** Most civic tech serves English speakers only, excluding millions who communicate in Pidgin, Hausa, Yoruba, or Igbo
- **Rural Exclusion:** Web-first platforms miss the 70%+ of Nigerians whose primary internet is WhatsApp

The 2027 election cycle is approaching. Nigerians need a trusted source of political truth.

The Solution

Decide9ja is the "everything app" for Nigerian politics.

We combine the largest political knowledge base in Nigeria with agentic AI to deliver instant, accurate, sourced political intelligence—via WhatsApp, web, and voice.

What Users Can Do

Ask About	Example Query
Representatives	"Who is my senator for Lagos Central?"
Politicians	"What has Tinubu done about fuel subsidy?"
Elections	"2023 presidential results in Kano"
Budget	"How much was allocated to education in 2024?"
History	"What coups happened in Nigeria?"
Fact-Checking	"Did Atiku really say this?"
Issues	"Report bad roads in my LGA"

Every answer includes sources: INEC, BudgIT, verified news, Wikipedia.

Platform Features

Core Intelligence

- **Representative Finder:** Instant lookup across 774 LGAs, 360 federal constituencies, 109 senatorial districts
- **Politician Profiles:** 4,789+ profiles with voting records, promises, controversies, net worth
- **Election Results:** Complete data from 2007-2023 (presidential, gubernatorial, legislative)
- **Budget Tracker:** 74,000+ records from BudgIT—federal allocations, FAAC, constituency projects
- **Fact Checker:** Verify claims against our verified database
- **News Intelligence:** Real-time aggregation from 5 major outlets, updated every 2 hours

Community & Engagement

- **Issue Reporting:** Citizens report local problems (power, roads, water, security)
- **Daily Briefings:** Personalized civic digest based on location and interests
- **Civic Quizzes:** Gamified learning about Nigerian politics and history
- **Achievement System:** Badges and leaderboards for civic engagement

Multi-Channel Access

Channel	Status	Reach
WhatsApp Bot	Live	49M Nigerian users
Web App	Live	Urban, professional
Voice Calls	Beta	Feature phone users
SMS Fallback	Ready	Rural areas

Data Assets

The Largest Nigerian Political Knowledge Base

Source	Records	Content
Wikidata	8,392	Politicians, parties, states, events
Wikipedia	1,646	Historical articles, coups, transitions
BudgIT	74,000+	Budget data, FAAC allocations, MDA projects
INEC	774 LGAs	Electoral geography, polling units, results
News Crawlers	Live	5 major Nigerian outlets
Academic Archives	110MB	Nigerian governance research

Total: 189MB of structured, sourced, verified political intelligence.

Data Quality

- **Dual Search:** Vector embeddings + keyword search for accuracy
- **Source Weighting:** INEC official > Premium Times > social media
- **Neutrality Checking:** Flags partisan language automatically
- **Citation Requirement:** Every response includes sources

Technical Architecture

Stack Overview

FRONTEND	BACKEND	DATA
Next.js 16 + React 19	FastAPI + Python	PostgreSQL
TypeScript 5	Claude API (LLM)	Vector Embeddin
Tailwind CSS 4	OpenAI (Embeddings)	Knowledge Graph
Radix UI	Twilio (WhatsApp/Voice)	Redis Cache
	NetworkX (Graph)	

AI System

Multi-Agent Architecture:

- Understanding Agent: Classifies intent
- Retrieval Agent: Routes to optimal data source
- Verifier Agent: Fact-checks claims
- Memory Agent: Maintains conversation context

Nigerian-Optimized NLP:

- 5 languages (English, Pidgin, Hausa, Yoruba, Igbo)
- Fuzzy matching for name variations ("Tinubu" = "BAT" = "Jagaban")
- Entity extraction for all 37 states, 774 LGAs

Production Deployment

- **Hosting:** Railway (auto-deploy on git push)
- **Database:** PostgreSQL with pgvector
- **Background Jobs:** APScheduler for news crawling, alerts
- **News Crawler:** Azure Functions (free tier)

Market Opportunity

The Numbers

Metric	Value
--------	-------

Nigeria Population	220M +
WhatsApp Users	49M
Internet Users	122M
Eligible Voters	93M registered
Politically Engaged (Target)	15M +

Why Now

- 1. **2027 Election Cycle:** Peak demand for political information
- 2. **WhatsApp Penetration:** Primary internet for most Nigerians
- 3. **Civic Tech Momentum:** Growing NGO investment in voter education
- 4. **AI Maturity:** LLMs now capable of nuanced political Q&A
- 5. **Data Availability:** Open government data finally accessible

Revenue Opportunities

Model	Target Customer
B2B API	NGOs, media houses, research firms
Premium Tier	Power users, journalists, analysts
Civic Partnerships	BudgIT, SERAP, election observers
Government Contracts	INEC, state election bodies
Embedded Widgets	Media sites, civic organizations

Competitive Advantage

Why Decide9ja Wins

Aspect	Decide9ja	Competitors
Politicians Covered	4,789 +	50-200
Geographic Depth	774 LGAs, 7-layer hierarchy	State-level only
Data Sources	6+ authoritative	1-2 sources
Languages	5 Nigerian languages	English only
User Channels	WhatsApp + Web + Voice	Single channel
AI System	Multi-agent, agentic	Single LLM or none
Real-Time News	Auto-updated 2-hourly	Manual or none
Community Features	Issue reporting + gamification	Lookup only

Technical Moat

- 1. **Nigerian NLP:** Fuzzy matching for Nigerian names is hard to replicate
- 2. **Data Relationships:** Knowledge graph connects politicians, parties, events
- 3. **Multi-Source Retrieval:** Combines database, knowledge graph, news, web
- 4. **Production Hardening:** Security, rate limiting, prompt injection guards

Current State

What's Built

- **42,000+** lines of production Python backend
- **60+** services covering all platform features
- **21 API routes** for web and mobile clients
- **Full Next.js frontend** with politician search, issues, dashboard
- **WhatsApp bot** with guided onboarding and conversational AI
- **Comprehensive test suite** for critical paths

What's Working

- Production deployment on Railway
- WhatsApp webhook receiving messages
- Knowledge graph queries returning results
- News crawler updating every 2 hours
- Full CRUD for issues, politicians, users

What's Needed

Priority	Need	Why
Critical	User acquisition	Platform ready, needs users
High	B2B sales	Revenue from API customers
High	Partnerships	BudgIT, INEC, NGOs for data + distribution
Medium	Mobile app	Native experience for power users
Medium	Fine-tuned models	Nigerian political domain expertise

Roadmap

Phase 1: Growth (0-6 months)

- Launch marketing campaign for 2027 election interest
- Onboard first 10 B2B API customers
- Secure partnerships with 3 civic organizations
- Target: 50,000 active WhatsApp users

Phase 2: Scale (6-12 months)

- 2027 election prediction engine
- Constituency-level sentiment analysis
- Civic education certification program
- Target: 500,000 users, \$100K ARR

Phase 3: Expand (12-24 months)

- Multi-country expansion (Ghana, Kenya, South Africa)
 - Real-time parliament session tracking
 - Enterprise platform for media companies
 - Target: \$1M ARR, regional presence
-

The Ask

Looking For: Co-Founder(s)

The engineering foundation is solid. What's needed:

Ideal Co-Founder Profile

Option A: Growth/Product

- Experience scaling consumer products in Africa
- Marketing expertise (viral campaigns, community building)
- Product intuition for emerging market users

Option B: Business Development

- B2B/B2G sales experience in Nigeria
- NGO, government, or media industry connections
- Fundraising experience for African startups

What You'd Own

- Go-to-market strategy and execution
- Revenue generation (B2B API, partnerships)
- Fundraising and investor relations
- Team building (sales, marketing, operations)

What's Already Built

- Full technical platform (no CTO needed immediately)
 - Production infrastructure (Railway, PostgreSQL, Redis)
 - Complete data pipeline (scrapers, knowledge graph, RAG)
 - Multi-channel delivery (WhatsApp, web, voice)
-

Why This Matters

Nigeria is Africa's largest democracy. 93 million registered voters deserve:

- **Truth** over WhatsApp misinformation
- **Access** to their representatives' records
- **Transparency** in how their money is spent

- **Voice** to report issues in their communities

Decide9ja makes informed citizenship possible.

The platform is built. The data is ready. The 2027 election is coming.

Let's empower Nigerian voters together.
